Subject: Draft ROD
Date: 09/25/2006 08:01 AM

Is there a time today that we could have a call and discuss the ROD? There are a couple of items we should discuss having to do with the focused extraction system. There is not a trigger for ending pumping so perhaps a concentration in the underlying aquifer as a target cleanup concentration that is also protective of the underlying drinking water. Also, I thought there was a TI waiver. Didn't that get approved and how does that fit into the silt zone? The general discussion about the silt zone is not robust enough. Bruce has reviewed the draft ROD and suggests that alternate cleanup limits may be appropriate.

Let me know when we can talk.
